Our current focus is on achieving production-ready and bug-free versions 1.0 and 2.0 of our project. The ongoing work involves collaboration with blockchain developers to progress to version 2, while full-stack developers are already engaged in the project.

The responsibilities for the team include reviewing and understanding the Scrum Board status, BugHerd tasks, and identified bugs. They are tasked with debugging and fixing existing issues, implementing new features from the project backlog, ensuring all features are functional, fully responsive, and compatible across various browsers. Additionally, they will work on existing and new database fields, integrate UI/UX changes based on provided design assets while maintaining high fidelity to the design.

Furthermore, the team will finalize third-party authentications such as Facebook, Twitter, and MetaMask, enhance SEO by optimizing profile URLs, and conduct thorough testing of the web application to address any identified functionality or performance issues.

Here's some information about the FreeBling online site:
https://app.freebling.io/

Here is Figma mockup:
https://www.figma.com/file/FtyziR4eHSB68FIarRZw7Y/FreeBling-v2.1.3?type=design&node-id=0-1&mode=design&t=1ZK9SShRXZYhWlrF-0

Quote:
the estimated initial budget is 10 ~ 15K a month, and in progress we will increase

The timeline would be 3 - 6 months

The each milestones at hourly basis - $70-120/hr todo list:

leaderboard is static, needs to be dynamic.
prizes needs ability to add multiple, currently only accepts one,
main image is currently set to prize image, needs a new database field for main image
YouTube and Spider tanks tasks need to be added
Ability to add social icon based on task type
Integrate metamask wallet signing/auth to the user's firebase/firestore database account
